

Assignments & Screenshots

35 screenshots | Assignment sessions: 10 Aug - 02 Sep 2026 | Captured: 11 Aug - 03 Sep 2026

Assignment dates below are the **portal session dates**, not submission deadlines. Each screenshot page has its capture timestamp, a match explanation and a clickable source link. Click a row to jump to the evidence.

Assignment date	Assignment / evidence group	Screenshot IDs	Count	PDF pages
10 Aug 2026	Setup and three hello programs	S02-S05	4	2-5
12 Aug 2026	Personal Finance Tracker	S08, S13	2	6-7
12 Aug 2026	Global Tech News Dashboard	S09	1	8
12 Aug 2026	Country Intelligence Dashboard	S10, S11, S12	3	9-11
13 Aug 2026	API calls and multi-turn conversation	S14, S15	2	12-13
17 Aug 2026	Prompt Caching	S16-S20	5	14-18
18 Aug 2026	Batch API practice	S21, S22, S23	3	19-21
17-18 Aug 2026	Caching / batching applied answers	S28	1	22
19-20 Aug 2026	Clean JSON, validation and retry	S24-S27	4	23-26
25 Aug 2026	Hooks and blocking guard	S29, S30, S31	3	27-29
31 Aug 2026	Agent SDK and applied ticket agent	S32-S37	6	30-35
02 Sep 2026	Router and specialist agents	S40	1	36

Matching notes. The D2 link repeats a Day 1 setup brief; the D3 attachment names the three dashboard projects; the D9 attachment says Cohort 2 on the Cohort 1 portal. S28 is matched by content despite its local Day 9-10 label. These discrepancies are retained in the page notes.

Coverage. 35 screenshots cover the matched assignments through Day 19. Matching shows what the image relates to; it does not certify completion or submission. Original screenshots are embedded in full; zoom in for code and small text.

[Day 1 assignment](#) | [Day 2 linked copy](#)

Captured: 2026-08-11 at 10.57.09 AM

GitHub repository `ccaf-day1` contains `hello-npm.js`, `hello_claude.py` and `hello_pip.py`.

CCAF Cohort 1 | Mansi | Prepared 11 September 2026

D1 | Set up your build environment

Assignment date: 10 Aug 2026

Captured: 2026-08-11 at 10.59.15 AM

[Day 1 assignment](#) | [Day 2 linked copy](#)

VS Code shows the hello_claude.py program and the Claude Code terminal session.

Matched to the setup brief. The portal also links a copy under D2 (11 Aug), but both briefs identify this as Day 1.

D1 | Set up your build environment

Assignment date: 10 Aug 2026

Captured: 2026-08-11 at 10.59.22 AM

[Day 1 assignment](#) | [Day 2 linked copy](#)

VS Code shows the Python requests-based hello_pip.py program.

Matched to the setup brief. The portal also links a copy under D2 (11 Aug), but both briefs identify this as Day 1.

D1 | Set up your build environment

Assignment date: 10 Aug 2026

Captured: 2026-08-11 at 10.59.29 AM

[Day 1 assignment](#) | [Day 2 linked copy](#)

VS Code shows the JavaScript hello-npm.js program using fetch.

Matched to the setup brief. The portal also links a copy under D2 (11 Aug), but both briefs identify this as Day 1.

D3 | Assignment 1: Personal Finance Tracker

Assignment date: 12 Aug 2026

[Day 3 assignment, page 1](#)

Captured: 2026-08-13 at 12.34.58 PM

Personal Finance Tracker source in VS Code; investment input fields are visible.

The Day 3 attachment explicitly lists this demo project, although the portal session title describes how Claude works.

D3 | Assignment 1: Personal Finance Tracker

Assignment date: 12 Aug 2026
[Day 3 assignment, page 1](#)

Captured: 2026-08-13 at 2.04.42 PM

Personal Finance Tracker dashboard displaying cash flow and financial summary cards.

The Day 3 attachment explicitly lists this demo project, although the portal session title describes how Claude works.

D3 | Assignment 2: Global Tech News Dashboard

Assignment date: 12 Aug 2026

Captured: 2026-08-13 at 2.02.56 PM

[Day 3 assignment, page 2](#)

Global Tech News dashboard with search, categories, news cards and a theme toggle.

Direct match to Homework 1 in the Day 3 attachment.

D3 | Assignment 3: Country Intelligence Dashboard

Assignment date: 12 Aug 2026

[Day 3 assignment, page 3](#)

Captured: 2026-08-13 at 2.03.35 PM

Country Intelligence dashboard with search and country comparison controls.

Direct match to Homework 2. Usage and cost screenshots are supporting development evidence; populated country results are not visible.

D3 | Assignment 3: Country Intelligence Dashboard

Assignment date: 12 Aug 2026

[Day 3 assignment, page 3](#)

Captured: 2026-08-13 at 2.03.51 PM

Country Intelligence project alongside a Claude usage report in the terminal.

Direct match to Homework 2. Usage and cost screenshots are supporting development evidence; populated country results are not visible.

D3 | Assignment 3: Country Intelligence Dashboard

Assignment date: 12 Aug 2026
[Day 3 assignment, page 3](#)

BT018	45.0%		311,700	171,410	\$2.06
BT019	64.0%		210,300	75,620	\$3.35
BT020	54.9%		424,300	191,320	\$4.98

where the savings came from

S001 smart manifest:

1,078,491 tokens (30.2%)

S021 output compression:

1,217,982 tokens (34.1%)

S030 read-once cache:

1,270,697 tokens (35.6%)

prices from 2026-06-11 (63 days old) · methodology: benchmark/METHODOLOGY.md

[E004] pricing is 63 days old (file dated 2026-06-11)

why: anthropic's pricing may have changed since this pricing file shipped. cost numbers below are an estimate, not a guarantee.

fix: update sipcode (npm i -g sipcode@latest) for the freshest pricing.

Country Intelligence project alongside a token-cost report in the terminal.

Direct match to Homework 2. Usage and cost screenshots are supporting development evidence; populated country results are not visible.

D4 | First API calls and multi-turn conversation

Assignment date: 13 Aug 2026

Captured: 2026-08-13 at 2.38.49 PM

[Day 4 assignment](#)

conversation.py prints follow-up responses about Paris, demonstrating retained conversational context.

Matches the multi-turn STRETCH exercise and raw HTTP / SDK APPLIED exercise described in the Day 4 brief.

D4 | First API calls and multi-turn conversation

Assignment date: 13 Aug 2026

Captured: 2026-08-13 at 2.39.00 PM

[Day 4 assignment](#)

raw_http.py and sdk_call.py print answers to the gravity question, showing both call paths.

Matches the multi-turn STRETCH exercise and raw HTTP / SDK APPLIED exercise described in the Day 4 brief.

D7 | Prompt Caching

Assignment date: 17 Aug 2026

[Caching and batching assignment](#)

Captured: 2026-08-21 at 12.08.39 PM

Initial Prompt Caching Practice run fails because authentication credentials are not resolved.

The app and usage fields match the caching exercise. Visible cache creation/read counts are zero, so these images do not establish a successful cache hit.

D7 | Prompt Caching

Assignment date: 17 Aug 2026

[Caching and batching assignment](#)

Captured: 2026-08-21 at 12.13.52 PM

Prompt Caching Practice responds on the selected Sonnet model and displays token usage; cache counts are zero.

The app and usage fields match the caching exercise. Visible cache creation/read counts are zero, so these images do not establish a successful cache hit.

D7 | Prompt Caching

Assignment date: 17 Aug 2026
[Caching and batching assignment](#)

Captured: 2026-08-21 at 12.18.45 PM

Prompt Caching Practice displays a longer answer and its usage fields.

The app and usage fields match the caching exercise. Visible cache creation/read counts are zero, so these images do not establish a successful cache hit.

D7 | Prompt Caching

Assignment date: 17 Aug 2026

[Caching and batching assignment](#)

Captured: 2026-08-21 at 12.23.15 PM

Prompt Caching Practice runs on the selected Haiku model and displays an explanatory response.

The app and usage fields match the caching exercise. Visible cache creation/read counts are zero, so these images do not establish a successful cache hit.

D7 | Prompt Caching

Assignment date: 17 Aug 2026
[Caching and batching assignment](#)

Captured: 2026-08-21 at 12.23.20 PM

Haiku response and usage panel show zero cache creation and cache read tokens.

The app and usage fields match the caching exercise. Visible cache creation/read counts are zero, so these images do not establish a successful cache hit.

D8 | Prompt Batching

Assignment date: 18 Aug 2026
[Caching and batching assignment, page 5](#)

Captured: 2026-08-21 at 12.25.02 PM

Batch API Practice displays one request object before submission.

Matches the batch challenge: inspect a request, submit a batch, check its status and collect results by custom_id.

D8 | Prompt Batching

Assignment date: 18 Aug 2026
[Caching and batching assignment, page 5](#)

Captured: 2026-08-21 at 12.25.27 PM

Batch API Practice displays a batch ID, processing status and request counts.

Matches the batch challenge: inspect a request, submit a batch, check its status and collect results by custom_id.

D8 | Prompt Batching

Assignment date: 18 Aug 2026
[Caching and batching assignment, page 5](#)

Captured: 2026-08-21 at 12.29.17 PM

Collected results list five prospect custom_id values, each with result_type succeeded.

Matches the batch challenge: inspect a request, submit a batch, check its status and collect results by custom_id.

D7-D8 | Caching and batching: written answers

Assignment date: 17-18 Aug 2026

1 CCAF Day 9-10 – Applied Answers

2

3 1. Caching

4

5 Reason:

6 The same large context is reused across many requests, so prompt caching

7 is the appropriate choice.

8

9 2. Batching

10

11 Reason:

12 The requests do not need immediate responses, so Batch API is appropriate.

13

14 3. Neither

15

16 Reason:

17 The workload does not have repeated context that would benefit from

18 caching, and the result is needed immediately, so batching is also not

19 appropriate.

20

21 4. Batching

22

23 Reason:

24 The requests can be processed asynchronously and do not require

25 immediate responses.

26

27 5. Neither

28

29 Reason:

30 There is no meaningful repeated context for caching and the response

31 needs to be available immediately.

32

33 6. Caching

Problems

Debug Console

Terminal

core_triage.py forces the save_triage tool and prints a structured ticket record.

S24-S25 match D9 (19 Aug); S26-S27 show the retry challenge associated with D10 (20 Aug), also included in the combined D9-D10 brief. The D9 attachment is labeled Cohort 2 on the Cohort 1 portal.

D9-D10 | Clean JSON, validation and retry

Assignment date: 19 Aug 2026 (D9)

Captured: 2026-08-21 at 12.38.38 PM

[Day 9 combined practice brief](#) | [Day 10 retry assignment](#)

validate_triage.py rejects the unsupported priority Critical and prints the allowed values.

S24-S25 match D9 (19 Aug); S26-S27 show the retry challenge associated with D10 (20 Aug), also included in the combined D9-D10 brief. The D9 attachment is labeled Cohort 2 on the Cohort 1 portal.

D9-D10 | Clean JSON, validation and retry

Assignment date: 20 Aug 2026 (D10); also in D9-D10 brief
[Day 9 combined practice brief](#) | [Day 10 retry assignment](#)

Captured: 2026-08-21 at 12.42.02 PM

challenge_triage.py prints a failed validation followed by a corrected attempt and final saved result.

S24-S25 match D9 (19 Aug); S26-S27 show the retry challenge associated with D10 (20 Aug), also included in the combined D9-D10 brief. The D9 attachment is labeled Cohort 2 on the Cohort 1 portal.

D9-D10 | Clean JSON, validation and retry

Assignment date: 20 Aug 2026 (D10); also in D9-D10 brief

Captured: 2026-08-21 at 12.46.54 PM

[Day 9 combined practice brief](#) | [Day 10 retry assignment](#)

A second view of the retry log shows the validation error, corrected output and successful final result.

S24-S25 match D9 (19 Aug); S26-S27 show the retry challenge associated with D10 (20 Aug), also included in the combined D9-D10 brief. The D9 attachment is labeled Cohort 2 on the Cohort 1 portal.

D14 | Hooks: logging and blocking guard

Assignment date: 25 Aug 2026

Captured: 2026-08-25 at 12.17.32 PM

[Day 14 assignment](#)

guard.sh inspects a Bash command and blocks deletion using an error message and exit code 2.

Matches the hooks brief: PreToolUse/PostToolUse configuration and the guard dry-run. S31 shows exit 2 for a delete command and exit 0 for a safe command.

D14 | Hooks: logging and blocking guard

Assignment date: 25 Aug 2026

[Day 14 assignment](#)

Captured: 2026-08-25 at 12.17.39 PM

settings.json configures PreToolUse and PostToolUse logging plus the blocking guard.

Matches the hooks brief: PreToolUse/PostToolUse configuration and the guard dry-run. S31 shows exit 2 for a delete command and exit 0 for a safe command.

Matches the hooks brief: PreToolUse/PostToolUse configuration and the guard dry-run. S31 shows exit 2 for a delete command and exit 0 for a safe command.

D17 | The Agent SDK: the loop you no longer write

Assignment date: 31 Aug 2026
[Day 17 assignment](#)

Captured: 2026-09-01 at 3.48.10 PM

Day 17 demo loads the order-support Skill and selects customer/value tools; Google Sheet access reports HTTP 400.

S32-S36 show the Day 17 demo with a loaded Skill and a Google Sheet HTTP 400 error. S37 directly matches the APPLIED task: ticket lookups, tool calls and an honest not-found result.

D17 | The Agent SDK: the loop you no longer write

Assignment date: 31 Aug 2026
[Day 17 assignment](#)

Captured: 2026-09-01 at 3.49.00 PM

Another Day 17 demo view records order-support Skill loading and tool-selection activity.

S32-S36 show the Day 17 demo with a loaded Skill and a Google Sheet HTTP 400 error. S37 directly matches the APPLIED task: ticket lookups, tool calls and an honest not-found result.

D17 | The Agent SDK: the loop you no longer write

Assignment date: 31 Aug 2026
[Day 17 assignment](#)

Captured: 2026-09-01 at 3.53.01 PM

Day 17 demo continues testing tool selection while the Google Sheet error remains visible.

S32-S36 show the Day 17 demo with a loaded Skill and a Google Sheet HTTP 400 error. S37 directly matches the APPLIED task: ticket lookups, tool calls and an honest not-found result.

D17 | The Agent SDK: the loop you no longer write

Assignment date: 31 Aug 2026

[Day 17 assignment](#)

Captured: 2026-09-01 at 3.53.58 PM

Day 17 demo uses Claude Code CLI login; the Skill loads, while the Google Sheet request still fails.

S32-S36 show the Day 17 demo with a loaded Skill and a Google Sheet HTTP 400 error. S37 directly matches the APPLIED task: ticket lookups, tool calls and an honest not-found result.

D17 | The Agent SDK: the loop you no longer write

Assignment date: 31 Aug 2026
[Day 17 assignment](#)

Captured: 2026-09-01 at 3.54.43 PM

Day 17 demo shows another tool-selection run and the persistent Google Sheet access error.

S32-S36 show the Day 17 demo with a loaded Skill and a Google Sheet HTTP 400 error. S37 directly matches the APPLIED task: ticket lookups, tool calls and an honest not-found result.

D17 | The Agent SDK: the loop you no longer write

- **Carrier:** DTDC
- **ETA:** 6 days ago

Your order has already been delivered! It was shipped via DTDC carrier. If you're asking why it took so long to arrive, that would depend on the shipping distance and carrier processing times. However, since it's already delivered, you should have received it by now.

Is there anything else you'd like to know about this order, or are you having trouble locating the package?

=====

QUESTION: I placed an order last week and it still has not arrived.
=====
Δ claude.ai connectors are disabled because ANTHROPIC_API_KEY or another auth source is set and takes precedence over your claude.ai login · Unset it to load your organization's connectors

I'd be happy to help you track down your order! To look up the status and find out what's happening with your delivery, I'll need your **order ID** or **order number**.

Could you provide that? Once I have it, I can check:
- Current status of your order
- Carrier information
- Expected delivery date (ETA)
- Any reasons if it's delayed

delegations: 0   terminal_reason: completed
```

Day 19 router script answers two order requests with one delegation each and asks for a missing order ID with zero delegations.

The script name and delegation counts match the router exercise. Counts of 1, 1 and 0 are visible; a two-delegation example is not shown.
